

# Paper Airplanes with Built In Launchers

## Materials Needed:

- Paper
- Rubberband
- Hole Punch

## Directions:

1. Grab a piece of paper.
2. Follow the instructions for one of the premade designs or create your own!
3. Use a hole punch to put a hole near the nose (front) of your plane.
4. Slide a rubber band through the hole and loop it through itself so that it is secure.
5. Bring your airplane to the gym to test it.
6. Use your finger to stretch the rubber band away from you and launch the plane into the air.

## Tips:

- Press every crease well. Sharp creases help the plane to fly through the air smoothly and reduce drag.
- Always fold on a hard, flat surface so that you can make firm creases.
